Office Action Summary

Application No.

09/352,335

Applicant(s)

MORI, HIROMI

Examiner

Douglas Q. Tran

Art Unit

2624

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-19 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-19 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on ____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☒ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☒ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) ____.
- 4) ☐ Interview Summary (PTO-413) Paper No(s) ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

Art Unit: 2624

DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on 7/14/98. It is noted, however, that applicant has not filed a certified copy of the such application as required by 35 U.S.C. 119(b).

Drawings

2. Figures 8-11, which are described from page 1 through 4, should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

4. Claims 1-2, 8-9 and 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Dobbs (US Patent No. 6,039,426).

As to claims 1 and 19, Dobbs teaches:

Art Unit: 2624

Displaying at least part of set data for the printer (12 in fig. 1) on a display (note: the purpose of printer driver (16 in fig. 1) is that provides the menu including setting data or print mode to a user through the graphical user interface);

Then, originating at least one of print data necessary for printing by the printer and control data necessary for controlling the printer (printer driver 16 outputting data and control data to printer 12 in fig. 1), the control data being originated on the basis of set data (i.e., print mode criteria) previously stored in a storage region (col. 3, lines 4-7 and 13-15) ; and

Outputting at least one of the originated print data and the set data to the printer (printer driver 16 outputting data and control data to printer 12 in fig. 1).

As to claim 2, Dobbs teaches the displaying step is executed in accordance with a print setting program , an instruction for starting the program being stored in the set data (col. 29, lines 29-45).

As to claim 8, Dobbs teaches the storage region includes a plurality of regions (20 in fig. 1).

As to claim 9, Dobbs teaches:

Displaying at least part of set data for the printer (12 in fig. 1) on a display (note: the purpose of printer driver (16 in fig. 1) is that provides the menu including setting data or print mode to a user through the graphical user interface);

Then, outputting to the printer, print data for printing by the printer and control data for controlling the printer (printer driver 16 outputting data and control data to printer 12 in fig. 1), the control data being originated on the basis of set data (i.e., print mode criteria) previously stored in a storage region (col. 3, lines 4-7 and 13-15).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 3-7, 10-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Dobbs and Ohtsuka et al. (US Patent No. 6,278,528).

As to claims 3-7, Dobbs teaches the features on claim 1 as indicated above. However, Dobbs does not teaches the print mode condition criteria including discharge conditions.

Ohtsuka teaches the printer has a plurality of discharge positions and can discharge a printed paper to a discharge position specified previously; the set data includes the discharge positions; the specified discharge position is displayed on the display; the originated control data includes the data which represent the discharge positions; and the control data is outputted to the printer prior to the print data; the displaying step involves changing the discharge position into another discharge position and updating the changed discharge position; the displaying step involves displaying the plurality of discharge positions of the printer; the displaying including confirming whether the discharge position has been updated after the specified discharge position is displayed on the display (fig. 4-6; and steps of 121 through 128 in fig. 9).

It would have been obvious to have modified the system of Dobbs for the print mode condition criteria including discharge conditions as taught by Ohtsuka. The suggestion for modifying the control means of Dobbs can be reasoned by one of ordinary skill in the art as set

Art Unit: 2624

forth by Ohtsuka because Ohtsuka teaches the application software is associated with printer driver allowing the user to select desired printing conditions before outputting in the printer.

As to claims 10 and 13, Dobbs teaches

A memory (20 in fig. 1);

Print data origination means (i.e., print driver module 16 in fig. 1) for originating print data necessary for printing by the printer (12 in fig. 1);

Control data origination means (i.e., print driver module 16 in fig. 1) for originating, on the basis of set data (i.e., print mode criteria) stored previously in the memory (col. 3, lines 4-7 and 13-15), control data (see control data from fig. 1) necessary for controlling the printer (col. 2, lines 29-31);

Output means (printer driver 16) for outputting at least one of the originated print data and the set data to the printer (12 in fig. 1);

control means for controlling the display so as to display at least part of the set data on the display.

However, Dobbs does not teaches displaying by control means at least part of the set data on the display displaying at least part of the set data on the display before the print data or the control data is originated

Ohtsuka teaches displaying at least part of the set data on the display before the print data or the control data is originated (fig. 4; and steps of 122 and 128 in fig. 9).

It would have been obvious to have modified the system of Dobbs for displaying at least part of the set data on the display before the print data or the control data is originated as taught by Ohtsuka. The suggestion for modifying the control means of Dobbs can be reasoned by one of

Art Unit: 2624

ordinary skill in the art as set forth by Ohtsuka because Ohtsuka teaches the application software is associated with printer driver allowing the user to select desired printing conditions before outputting in the printer.

As to claim 11, Dobbs the memory includes a plurality of storage regions (20 in fig. 1).

As to claim 12, Ohtsuka teaches the printer includes a plurality of dischargers, the control data being data for designating at least one of the dischargers(see print size in fig. 6, col. 7, lines 7-12).

As to claim 14, Ohtsuka teaches updating means for updating the designated discharger on the display (col. 7, lines 65 through col. 8, line 3).

As to claim 15, Ohtsuka teaches the updating means rewrites, when the designated discharger is changed into another discharger, the discharger designation stored in the memory (col. 8, lines 4-7).

As to claim 16, Ohtsuka teaches the plurality of dischargers are shown on the display (see print size in fig. 6, col. 7, lines 7-12).

As to claims 17 and 18, due to the similarities of these claims to those of claims 10 and 12, these claims are rejected as the reasons applied to claims 10 and 12.

Contact Information

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Douglas Q. Tran whose telephone number is (703) 305-4857 or E-mail address is Douglas.tran@uspto.gov.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-4700.
